## PROFESSIONAL EXPERIENCE

### Tampere University of Applied Sciences

#### Robotics Software Engineer

Jan 2026 - current

Developing a centralized software platform at FieldLab (Tampere) to coordinate and automate tasks across multiple robots. The system is designed with group-based robot management and centralized task assignment. Also contributing to build and deployment processes as the platform continues to evolve.

### Solita Oy

#### Software Architect Intern

Jan 2024 - May 2024

As a Software Architect Intern at Solit Oy, I designed and developed an iOS app to detect potholes using CoreMotion and CoreLocation for real-time drop detection and GPS tagging. I implemented a scalable AWS backend design with Lambda, API Gateway, DynamoDB, and S3 for data processing and storage. The system integrates sensor fusion for improved motion accuracy and supports a web dashboard for visualizing pothole data to assist road maintenance teams.

### Tampere University of Applied Sciences

#### Project Manager

Jan 2024 - May 2024

Led a team as Project Manager for a school project. Objective of the project is to build an integrated networking system for 3D printers. Used technologies in this project such as RaspberryPi, Flask, IDM, Data management (SQL), AutoSSH, SSH tunnel, Cloud hosting and Automation.

## EDUCATION

### University of Helsinki

#### Master's Programme in Computer Sciences

Majors: Algorithm

2025-2027

### Tampere University of Applied Sciences

#### Bachelor of Engineering

Majors: Software Engineering

2021-2025

## PROJECTS

### Autonomous Vehicle    Automated Drone Delivery

## ACHIEVEMENTS

**AWS Hackathon, 2022** Position: 1st (Champion)

**Microsoft Hackathon, 2022** Position: 1st (Implement)
